Remarks: _____

The applicant must be the owner of the described property (or an authorized agent of the owner) or the lessee of Port property. **Applications that are incomplete or received via fax or electronic mail will not be processed.** Connection to the water system and installation of the meter must be completed by the contractor identified above, which must be an experienced contractor licensed to do business in Washington State. Installations must be inspected by the Port before burial and must include a backflow prevention assembly tested by a licensed BPA tester. Customer must comply with all applicable Port and Washington Dept. of Health rules and regulations and any other rules and regulations as may be established from time to time governing Washington State Group A Public Water Systems. Customer's internal plumbing systems must be installed and maintained in compliance with the most current edition of the Pacific Northwest section of the American Water Works Association standard for cross connection as it pertains to the prevention of water system contamination and pressure surges. The undersigned indemnifies and holds harmless the Port, its agents, and its employees for any damages, including the loss of property, sales, or service, in the event of water pressure variations or the disruption of the water supply as a result of repairs, routine maintenance, power outages, and other conditions normally expected in the operation of a water system. **The signature below indicates the Customer's acceptance of these terms and the requirements that follow.**

Requirements

1. The customer agrees to install, operate and maintain at all times their plumbing system in compliance with the current edition of the plumbing code having jurisdiction as it pertains to the prevention of contamination and protection-from thermal expansion due to a closed system that could occur with the present or future installation of backflow prevention assemblies on the customer's service and/or at plumbing fixtures.
2. The customer agrees to provide access for to employees or representatives of the Port of Klickitat to all parts of the served premises during reasonable working hours for connection control or other public health related surveys.
3. The customer agrees to provide access for the employees or representatives of the Port of Klickitat to all parts of the served premises at all times in emergency situations.
4. The customer agrees to install all backflow prevention assemblies required by the Port of Klickitat and to maintain those assemblies in good working order. Such assemblies shall be of a type, size, and make as approved by the Port and the Washington State Department of Health, Drinking Water Division. Assemblies shall be installed in accordance with all standards established by the Port.
5. The customer agrees to have all backflow prevention assemblies tested upon installation and annually thereafter as well as when requested by the Port after repair or relocation. All testing shall be done by a certified backflow prevention assembly tester (BAT) approved by the Washington State Department of Health. A copy of the results shall be delivered to the Port within 30 days of such testing.
6. The customers agrees to obtain prior approval from the Port for all changes in water use and any alterations or additions to the plumbing system.
7. The customer acknowledges the right of the Port, in keeping with Washington State regulations and the Port's risk management policies, to impose retroactive requirements for additional cross connection control measures.
8. The customer acknowledges the right of the Port to discontinue water supply upon giving 24 hours notice, or without notice if required to protect the public health or the customer fails to cooperate in the installation, maintenance, repair, and regular testing of backflow prevention assemblies or air gaps as required.
9. The customer agrees to indemnify and hold the Port, its agents, and its employees, harmless for all contamination of the customer's plumbing system or the Port's distribution system that results from an unprotected or inadequately protected cross connection within their premise. This indemnification shall include all backflow conditions that may arise from the Port's suspension of water supply or reduction of water pressure, recognizing that the air gap separation otherwise required would require the customer to provide adequate facilities to collect, store, and pump water for their premise.
